PortofoliYou

Midterm Progress Report

A purpose-driven portfolio for a multidisciplinary creator

Nethania · October 20, 2026

Live: portofoli-you.vercel.app

Project overview

THE PROBLEM

My work spans film, animation, design, content and research. A recruiter or collaborator usually cares about only one part, and a single long portfolio buries it.

THE IDEA

Ask visitors why they are here, then show only the relevant work, framed for their perspective.

WHO IT'S FOR

Recruiters, creative collaborators, academic readers, and anyone just exploring.

≤ 3 clicks

from landing page to relevant work

5 disciplines

Film · Animation · Design · Content · Research

4 visitor purposes

Hiring · Collaborating · Academic · Exploring

Objectives

Relevant work, fast

Every visitor reaches work that matters to them in three clicks or fewer.

Different perspectives

One project is framed differently for recruiters, collaborators and researchers.

Content I can manage myself

Add, edit and feature projects in an admin dashboard: no code, no redeploy.

Private and simple by design

No visitor tracking or accounts; the database stores only the fields it needs.

Main features and contents

Purpose selection

Home asks “What brings you here?”: hiring, collaborating, academic, or exploring.

Category filter

Pick Film, Animation, Design, Content Creation, Research, or Other; one tap opens the list.

Purpose-based detail

Video, stills, and a panel “For Recruiters” or “For Collaborators”.

About

Profile, skills, experience, education, and a CV download link.

Contact

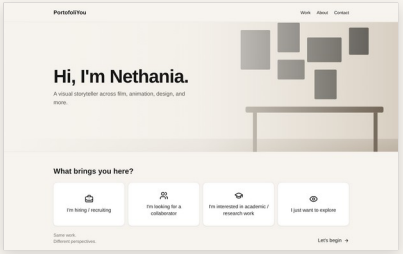

Validated form with inline errors; messages are saved to the database.

Admin dashboard

Private login to add, edit, delete and feature projects, and read messages.

How a visitor moves through the site

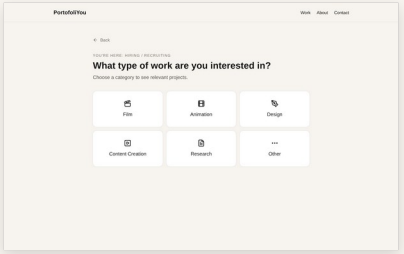

1

Choose a purpose

"I'm hiring / recruiting"

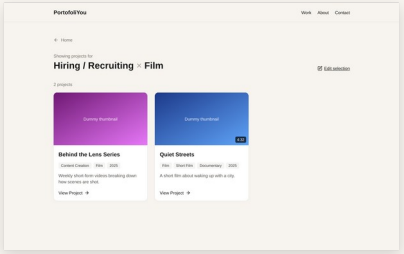

2

Choose a type of work

One tap, e.g. Film

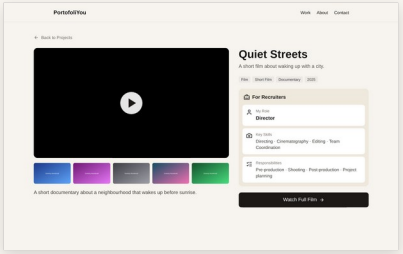

3

See matching projects

Newest first, with tags

4

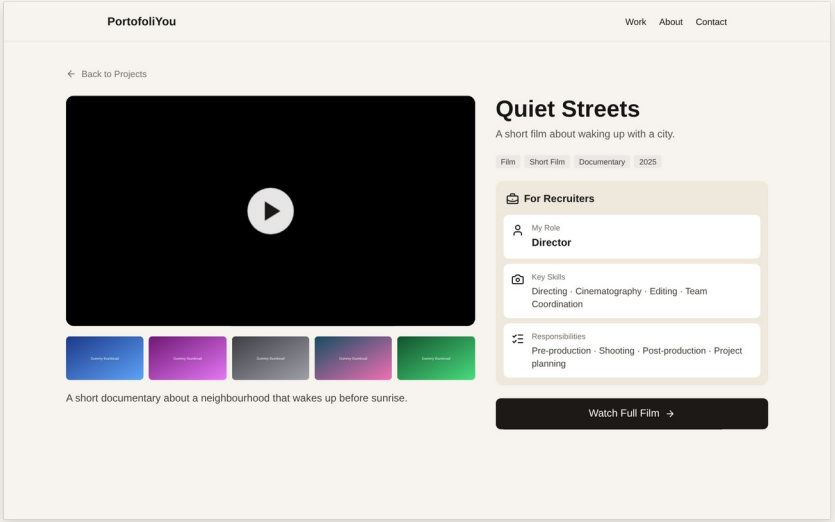

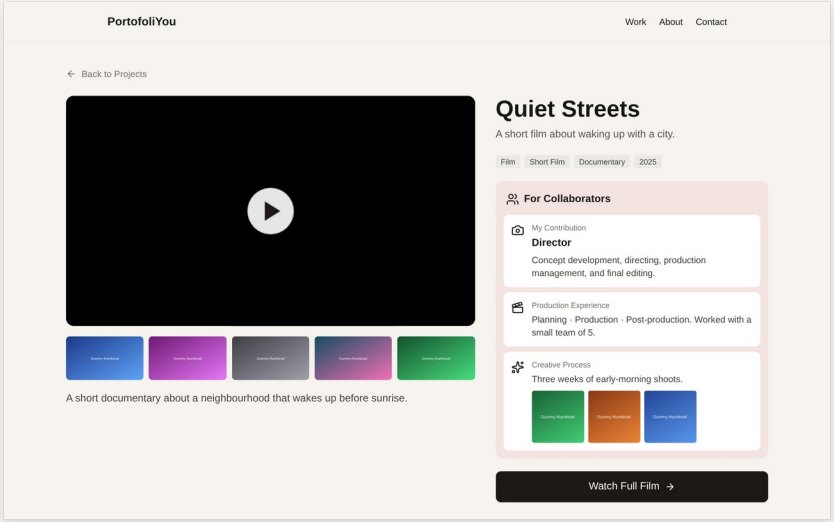

Open a project

Panel for recruiters

3 clicks for hiring and collaborators (purpose → type → project). **2 clicks** for academic and exploring visitors, who skip the type step.

Same work, different perspectives

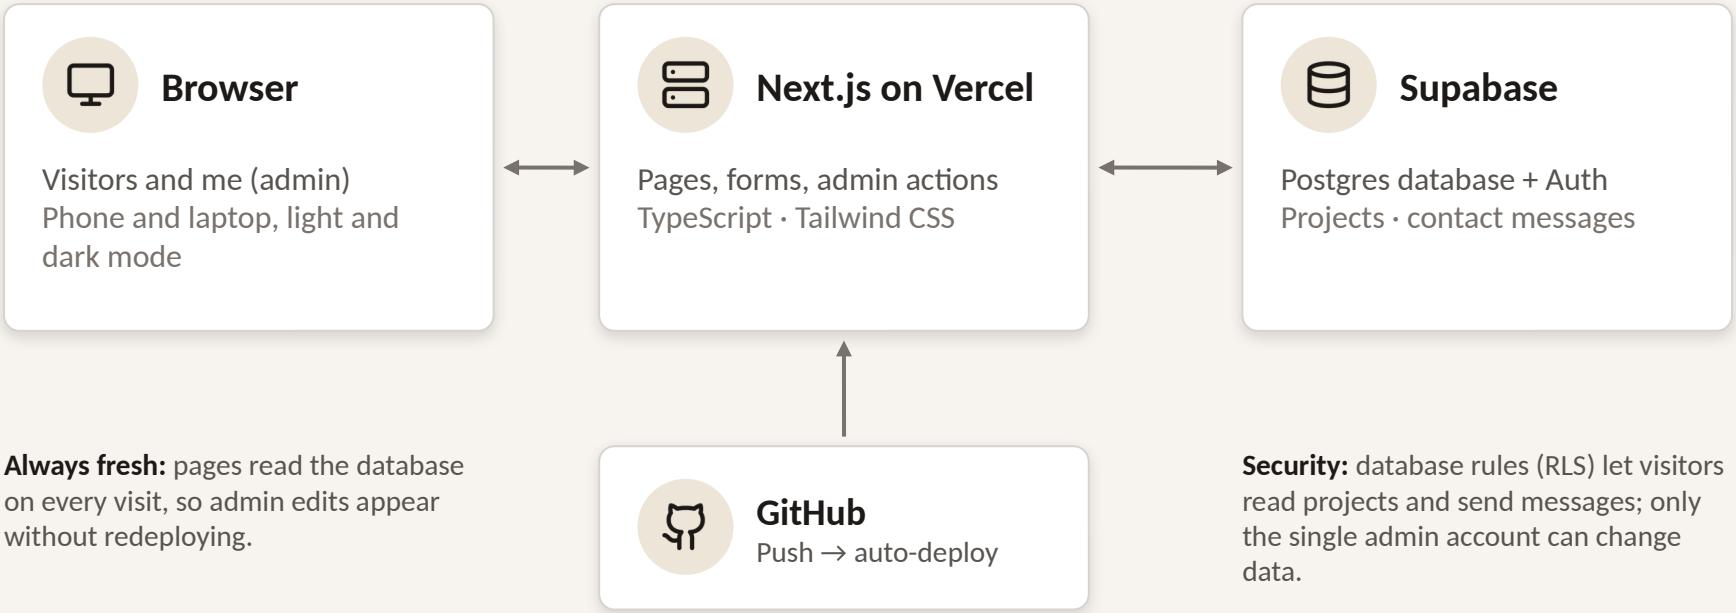

For Recruiters

My role · Key skills · Responsibilities

For Collaborators

My contribution · Production experience · Creative process

Technology and architecture

Always fresh: pages read the database on every visit, so admin edits appear without redeploying.

Security: database rules (RLS) let visitors read projects and send messages; only the single admin account can change data.

Development schedule

When	Milestone	Status
Sep 29	Phase 1: Next.js + Tailwind setup, Supabase database design	**Done**
Oct 6	Phase 2: all screens built with sample data	**Done**
Oct 6	Phase 3: Supabase connected, admin login and dashboard	**Done**
Oct 6	Redesign: purpose flow and purpose-based detail pages	**Done**
Oct 20	Midterm presentation; admin account and database update live	**This week**
Oct 27 – Nov 9	Real content: projects, videos, photos, bio, CV	**Planned**
Nov 10 – Nov 23	Polish: link previews, loading states, accessibility	**Planned**
Nov 24 – Dec 7	User testing with 5 people, then fixes	**Planned**
Dec 8 – Dec 21	Final checks, final report and live demo	**Planned**

How I use generative AI

Me: product owner

- Define scope, rules and design mockups
- Make every product decision
- Test each step on the live site

AI: Claude Code (coding agent)

- Write, run and test the code
- Explain each step in plain language
- Ask before big decisions; commit to GitHub

CLAUDE.md: persistent project spec

```
## Working rules
- Owner is new to web dev. Explain
  steps in plain language.
- Build one screen/feature at a time;
  after each, give steps to verify.
- Check in before big structural
  decisions.
- Do not build anything outside scope.
- Excluded: AI recommendations, visitor
  accounts, payment, chat, analytics,
  file uploads, multi-language.
- Privacy: store only schema fields;
  no visitor tracking.
```

Read by the AI at the start of every session, so it works like a system prompt for the whole project.

Prompt specifications by stage

Stage	My prompt (summarised, translated from Indonesian)	Result
Recovery	Bring the Phase 1 history from my old GitHub account into this repo and check that it builds.	History restored; build passes
Phase 2	Continue Phase 2: Home screen with dummy data. (Repeated for each screen.)	5 screens with sample data
Phase 3	Connect to Supabase. (I provided the Project URL and publishable key.)	Live data; contact saved
Admin	Build Admin Login + Dashboard: add/edit/delete, featured toggle, read messages.	Admin built and tested
Redesign	I want it like this, with “What brings you here?”. (5 mockup figures attached.)	Purpose flow + detail panels
Refine	No “Show Projects” click: tapping a type should open the projects directly.	One-tap category page
Style	Restyle About and Contact to match the new warm design.	Consistent card design

Prompt structure and human decisions

Every request includes

Context	What exists now (project rules file, current site, screenshot)
Goal	One screen or feature, e.g. “purpose-based detail page”
Constraints	Scope list, privacy, my design mockup as reference
Check	How I verify it, e.g. “Animation shows only Animation projects”

The AI asked before building; I decided

What does “Other” mean?
→ Show all categories

What do Academic and Explore show?
→ Research projects only / everything

How should projects be ordered?
→ Newest first

Real photos already?
→ Use placeholders for now

Current development status

9

screens built

13

commits on GitHub

Live

on Vercel since Oct 6

Completion checks from my project plan

- **Home → Animation shows only Animation projects (incl. multi-tagged)**
  Working on the live site
- **Contact form shows a confirmation and the message is saved**
  Working on the live site
- **Contact messages visible in the Admin Dashboard**
  Built; waiting for my admin account
- **Admin edits a title → appears on the site without redeploying**
  Built and tested; live check this week

Next steps in development

01

Go live with admin

Create my admin account, turn off public sign-up, run the database update.

02

Real content

Replace sample projects with my own videos, stills and descriptions.

03

Real profile

Bio, skills, experience, education, hero photo and CV link.

04

Clean up and test

Remove sample files; re-run all completion checks on the live site.

Goal by November 9: the live site shows only my real work.

Planned improvements and additional features

Link previews and SEO

Title, description and image when the link is shared.

Faster loading

Loading placeholders and optimised images.

Accessibility check

Keyboard use, contrast and image descriptions.

Gallery viewer

Open stills in a full-screen viewer.

Multi-select categories

Reconsider after user testing.

Better admin tools

Image previews and project ordering.

Out of scope by design: AI recommendations, visitor accounts, payment, chat, visitor tracking/analytics, file uploads, multi-language.

Future service and deployment plans

Hosting Vercel, with automatic deploys from GitHub main

Data Supabase free tier (Singapore region) for projects and messages

Domain Optional custom domain for the final version

Security Single admin, sign-up disabled, database rules (RLS)

Maintenance Content updated in the admin dashboard; no code needed

After the course

PortofoliYou becomes my real portfolio for internship and job applications: one link on my CV, LinkedIn and Instagram that shows each visitor the work they came for.

Thank you

Questions and feedback are welcome
